Dear Sergiy,

Computer science is a rapidly developing specialty mostly dealing with computer software and hardware. Your graduates must be able to adapt quickly to this challenging field.

I was very impressed when I analyzed the educational program – Computer Science of the Faculty of cybersecurity, computer and software engineering, National Aviation University. Indeed, it presented compliance with all the rules and regulations of programs for PhD students. It is on equal terms with the up-to-date programs of leading educational institutions in Europe and the United States.

The only recommendation for improving student learning is to introduce a selective course related to quantum computing. I hope you take this into account when reviewing your educational programs.

I hope for future impactful cooperation in both educational and scientific directions.

Maksim Iavich

PhD, Professor of Caucasus University
